

To:

Janette Sadik-Khan,
Permanent Chair,
Global Designing Cities Initiative.

Dear Janette,

Congratulations on the recently released Global Street Design Guide by the Global Designing Cities Initiative. This new publication by the National Association of City Transportation Officials represents a positive vision for world-class city street design that meets the goals of city leaders and the desires and needs of local communities. We are in the midst of unprecedented change of our transportation and mobility systems. New opportunities and innovations are becoming available to address public health, climate change, and improve communities and economy that were inconceivable only a decade ago.

At a time when we are striving to react to these trends, the Global Street Design Guide offers a vision and guidance to improve the safety and livability of our streets for pedestrians, bicyclists, drivers, and transit users. City streets demand a unique approach unmet by conventional design guidelines. We see the Guide as an indispensable tool in planning modern city streets, especially as we work toward a common vision with our partners at all levels of government and around the world.

Anthony Eggert, on behalf of ClimateWorks Foundation, San Francisco, CA, officially endorses the Global Street Design Guide as an integral and efficient tool for designing safe and sustainable streets and public spaces.

Regards,

Anthony Eggert
